

**NORTH CAROLINA BREAST AND CERVICAL
CANCER CONTROL PROGRAM (NC BCCCP)
RESCREENING POLICY
_____ (Provider)**

The _____ (Provider) recognizes the need for BCCCP eligible women to be re-screened for breast and cervical cancer according to the NC BCCCP Contract Addendum and the NCBCCCP screening guidelines (see the NCBCCCP Mammography Rescreening Policy, July ____). Re-screening is defined as the percentage of women age 50-64 screened in any given year that received a subsequent screening mammogram within 9-18 months.

For appropriate implementation of the local policy, the BCCCP Coordinator will assure that:

- ◆ priority for mammograms is given to previously screened BCCCP eligible women through the use of (a log, tickler, or computer) tracking system:
- ◆ a monthly list of women to be re-screened will be provided to (the BCCCP clerical/support staff) for appointment reminders to be sent:
- ◆ (Clerical/support staff) will monitor appointments made and if patient does not call within 1 month to schedule appointment, a follow-up letter will be mailed to the patient (form letter #_____)
- ◆ A list of patients who do not respond to the letter will be given to (the BCCCP Coordinator) by (the clerical/support staff) for phone call follow-up:
- ◆ If patient continues to be unresponsive or cannot be located, no further appointments will be made unless initiated by the patient:
- ◆ Documentation in patient medical records indicates date and type of contacts made and result:
- ◆ Medical record indicates patient received counseling at each visit re: purpose and importance of yearly re-screening. (suggest check off block on flow sheet: example: ☒ re-screening counseling)
- ◆ Monthly reports from NCBCCCP will be reviewed for re-screening rates, discussed with BCCCP staff and a plan of action will be implemented if rescreening rate falls below 50%.
